

# SCOTTISH COCHLEAR IMPLANT PROGRAMME

## Getting an ABR

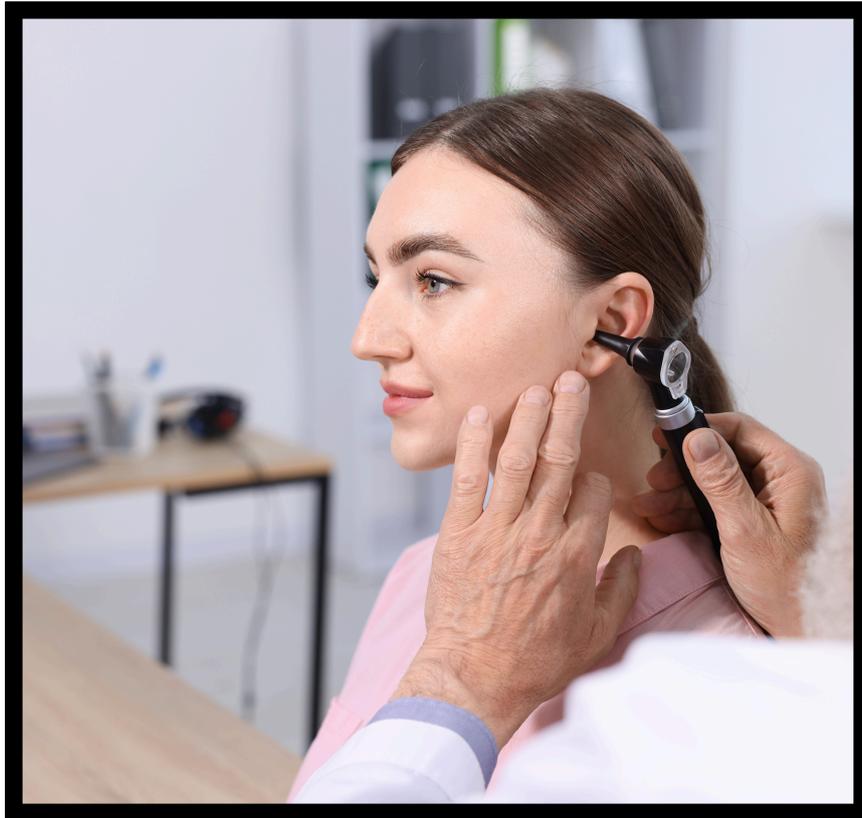

I am visiting the hospital so  
my hearing can be  
checked.

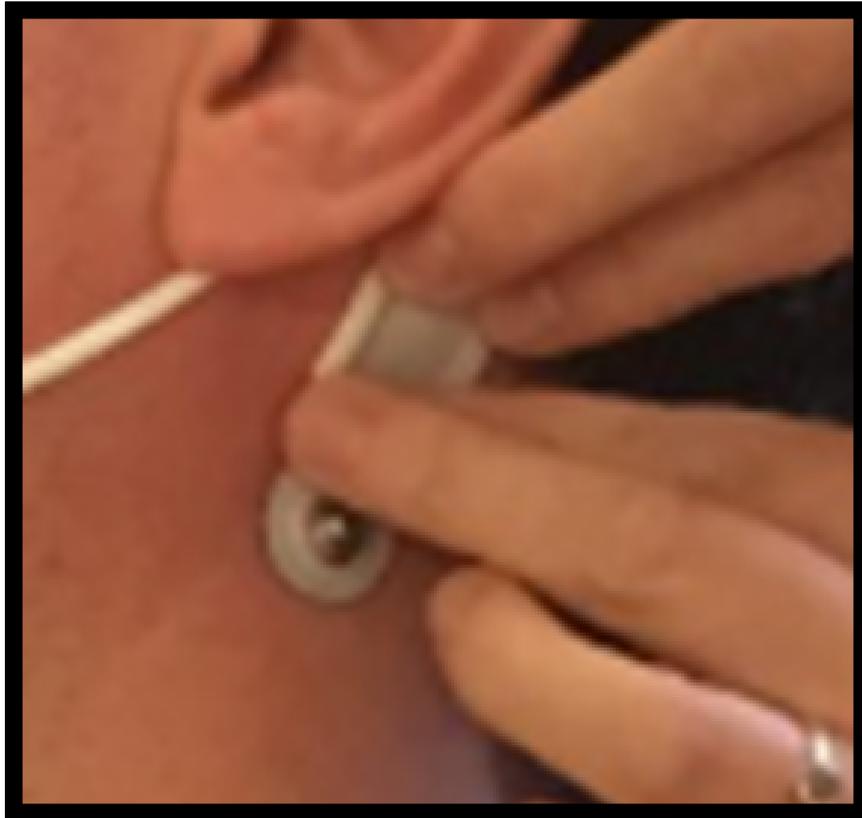

I will visit the Scottish  
Cochlear Implant  
department.

I will go to a room with a  
bed that I can lie on.

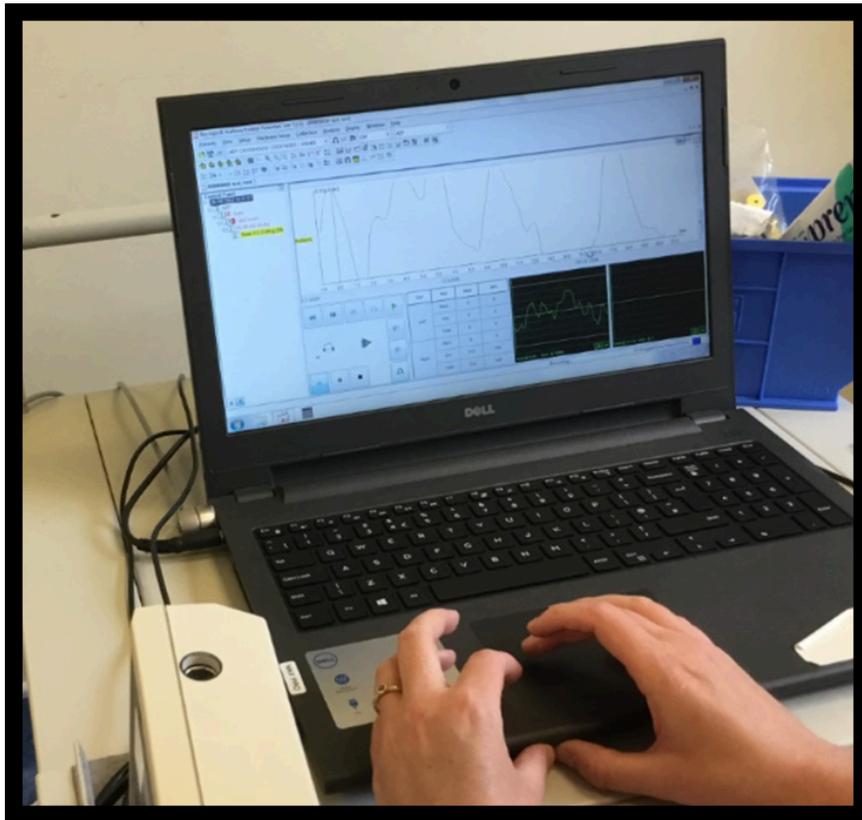

The scientist will use a special torch to look inside my ears. This will not hurt.

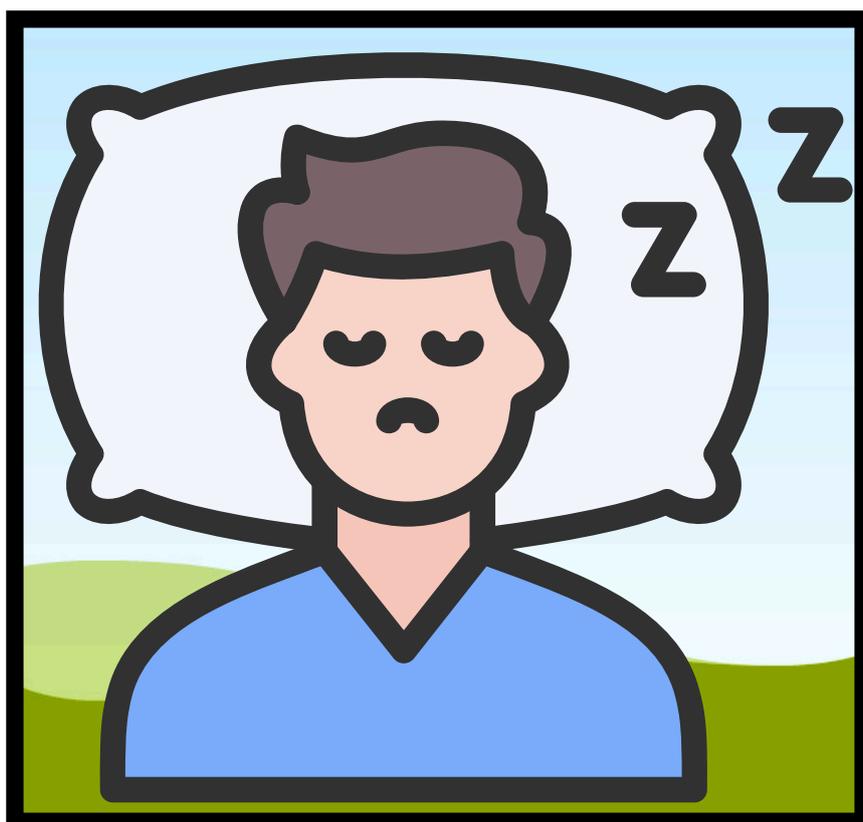

Then they will clean my forehead and behind my ear so that they can put some stickers there.

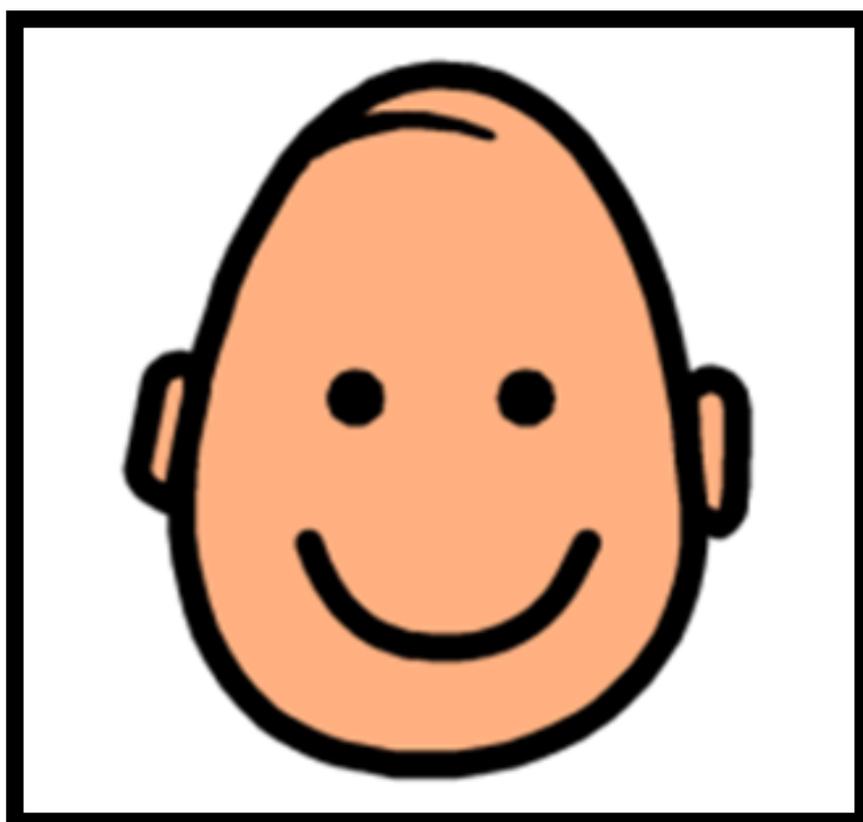

Some cables will be attached to the stickers on my forehead and behind my ear.

The test will then start. I will not feel anything but I might need hear some beeps. This is ok.

I might fall asleep and this  
is ok too.

The test will take about 1 hour. Then I can go home.
